COMPANY PROFILE

40 YEARS IN THE MINING INDUSTRY....

That must say something about Guduza System Technologies (PTY) Ltd.

Guduza System Technologies is a progressive leader in the local and international mining industry.

- We are a proudly based South African Company
- Level 2 BEE
- Proudly leading up to half a century in the industry

How did Guduza come about?

The complete Grintek Mining Electronics was bought out by Guduza System Technologies (Pty) Ltd as a going concern. The prime aim of this move was to place full focus in the Mining Sector. Guduza is proud to say that we have been operating for over 40 years.

History:

Guduza is a leading electronics manufacturing company servicing the mining industry. Our expertise lies in the design, development and implementation of innovative electronics systems for this industry and some of the products that are sold throughout the world.

Quality Assurance:

Guduza prides themselves on the quality of our products. We have a full Quality Assurance Department to ensure that all our products that leave our factory with full QA verification.

Quality Standards:

Guduza has a certification mark for intrinsically safe apparatus from MASC for EXIA equipment manufactured, PERMIT NO EX1-02m.

Close to the work Face:

Guduza has been committed to work closely together with the end users for half a decade and with our innovative well designed products and systems has met the mines REAL needs.

GST has continuously kept up with the need of technology advancement and has upgraded products and systems in accordance with the changing requirements.

Products and Systems:

- Environmental Monitoring and Control Systems
- Conveyor Belt Systems
- Shaft Communication and Management System
- Inductive Chargers
- Audio Intercom
- Underground Communication Systems
- Mine Rescue Communication Systems
- Auxiliary Products
 - Generator and UPS Services
 - Load Cells
 - Fuel Management Systems
 - MST Wi-Fi Systems
 - Sigma Leaky Feeder Systems
 - LTE Systems
 - Magnetic Switches

System Engineering:

Guduza System Technologies has a System Integration Division with a maintenance infrastructure to support all systems and products delivered to a range of customers. We offer a 24hr standby support service, which ensures minimal system downtime, together with a fully equipped workshop and laboratory to handle all client repair and maintenance needs.

Technology Specialist Areas:

- Underground communication equipment
- Coal clearance and environmental telemetry systems
- Shaft communications systems

Research and Development:

The innovative Research and Development facility within Guduza has almost over 40 years developed numerous small and large products and systems, specific to our client's needs. The facilities within the company have capabilities ranging from R.F through to digital systems.
